Projects

Yield Improvement

549 Days

- Enhanced the yield of Omez by 3 % through implementing process optimization and efficiency improvements.

- Analyzed production processes and identified opportunities to increase Omez yield.

- Implemented strategic changes resulting in a 3% increase in Omez yield.

- Developed and executed initiatives that improved Omez yield by 3%.

Time reduction in Type B cleaning

6 Months

- Streamlined Type B cleaning process, resulting in a 20% reduction in cleaning time, saving approximately 200 man-hours over a

- To follow GMP and SOP.
- Implementation of cGMP during production activities, maintaining standard of high quality.
- Performed in process checks and completion of BMR.
- Man Power Handling.
- Before start area line clearance responsibility.
- Material verification through dispensing by using SAP, ATTACHI (eBMR).
- After completion of batches Yield reconciliation, AQL of Batch processing.
- Batch completion stage wise details entry in SAP.
- PMP process can follow by Maintenance department.
- All area calibration done followed by their frequency by the help of calibration department.
- Increasing yield process by following all processes by changing some technical changes.
- Usage of equipment and planning shall be increase.

6-month period.

- Implemented efficiency measures that led to a 15% decrease in Type B cleaning-related costs, contributing to overall project cost savings.

- Utilized data analysis to identify bottlenecks in the Type B cleaning process, leading to a 20% improvement in productivity and on-time completion of deliverables.
